Module 0 About This Course	0–1
Course Objectives.....	0-3
Prerequisites	0-6
Rational University Curriculum.....	0-7
Module 1 Best Practices of Software Engineering	1–1
Practice 1: Develop Iteratively	1-7
Practice 2: Manage Requirements	1-11
Practice 3: Use Component Architectures	1-15
Practice 4: Model Visually.....	1-18
Practice 5: Continuously Verify Quality	1-22
Practice 6: Manage Change	1-27
Module 2 Concepts of Object Orientation	2–1
What Is Object Technology?	2-4
Basic Principles of Object Orientation	2-15
Representing Classes in the UML.....	2-24
Review	2-51
Module 3 Requirements Overview	3–1
Introduction	3-3
Key Concepts	3-7
Use-Case Model	3-10
Glossary.....	3-19
Supplementary Specifications.....	3-22
Review	3-31
Module 4 Analysis and Design Overview	4–1
Key Concepts	4-5
Analysis and Design Workflow	4-11
Module 5 Architectural Analysis	5–1
Architectural Analysis Overview	5-4
Key Concepts	5-5
Define the high-level Organization of Subsystems.....	5-10
Identify Analysis Mechanisms.....	5-19
Identify Key Abstractions.....	5-28
Create Use-Case Realizations.....	5-32
Review	5-38

Module 6 Use-Case Analysis	6-1
Use-Case Analysis Overview	6-4
Supplement The Use-Case Description	6-6
Find Classes From Use-Case Behavior	6-8
Distribute Use-Case Behavior to Classes	6-26
Describe Responsibilities.....	6-36
Describe Attributes and Associations	6-40
Use-Case Analysis Steps	6-52
Unify Analysis Classes	6-57
Review	6-63
